TECHNICAL SPECIFICATIONS

Height above ground level: 201 cm

Depth: 25 cm

Length: 125 cm

Weight: 65 kg

Security area: 14 mq

Fall height: 0 cm

RECOMMENDED AGE

6+

FIXING SYSTEM

Base plate anchored with bolts above ground

BASE

N°1 plinth 120x120x20 cm 720 kg

MATERIALS

Galvanized and coated steel

ARPA

An urban sculpture “stolen” from the world of music. Arpa adds originality and identity to a public space. The rigid rods, reminiscent of harp strings, are an invitation to “play” the instrument. Striking the strings of different lengths produces a variety of sounds, giving voice to the harp. Made of S235JR steel box-shaped profiles.

GAME PARKS

| AMUSEMENT PARK

SQUARE ROTATION

An amusing, manually operated fan. When you turn the handle, a light breeze is created. A breath of fresh air on hot summer days, or the chance to discover how moving air works with your friends.

SQUARE ROTATION

This playful, futuristic tunnel consists of a rotated, geometric series. Going through the tunnel, the child has to rely on his/her sense of balance, put to the test by the distorted perception of the floor caused by the rotating effect of the structure.

NATURE SLIDE

A slide suitable for everyone, designed to form part of its natural surroundings. There are two areas: a ladder with climbing handles and the slide itself. It can be positioned either on existing hills or artificial ones created ad hoc. AISI 304 stainless steel structure.

GAME PARKS

AMUSEMENT PARK

GAME PARKS | **HEALTH PARK**

CYCLETTE

Cardio equipment for endurance training, but also useful when warming up before running. Cyclette moves the body's upper and lower muscles to simulate a cycling movement. Made of Ø 60 mm and 50 mm tubular, S235JR steel, with rubber handles and saddle.

GAME PARKS

HEALTH PARK

CYCLETTE

A machine for training pectoral and rhomboid muscles, as well as the latissimus dorsi. A system of levers employs the user's weight to raise and lower the seat. Made of $\varnothing$ 75 mm, 60 mm and 50 mm tubular, S235JR steel, with rubber seat and handles.

BENCH

Bench for free exercise of the stomach, lumbar and back muscles. Made of Ø 60 mm and 50 mm tubular, S235JR steel, with rubber seat.

GAME PARKS | **HEALTH PARK**

LEGPRESS

A machine for toning up hamstrings, quadriceps and gluteal/buttock muscles by using leverage to create resistance when raising the seat. Made of Ø75mm, 60mm and 50mm tubular, S235JR steel, with rubber seat.

LEGEXTENSION

A machine for toning up quadriceps by means of a friction system which creates resistance to the pivot movement. Made of Ø75mm, 60mm and 50mm tubular, S235JR steel, with rubber seat.

ELLIPTICAL

Cardio equipment for endurance training, but also useful when warming up before running, moves the body's upper and lower muscles to simulate a fast walking movement. Made of Ø 75 mm, 60 mm and 50 mm tubular, S235JR steel, with rubber handles.

GAME PARKS | **HEALTH PARK**

MUSCLE TONING

Three pieces of fitness equipment aimed at workouts for older users. They are designed to be set near an existing park bench: a classic exercise bike, a hand cycle and a balance board for balance training. Rotating support column made of Ø mm 60 tubular, S235JR steel, with rubber handles.

GAME PARKS

HEALTH PARK

WALL BARS

The Wall bars makes the practice exercises in suspension or on the floor, to the strengthening of various muscle groups and a wide range of stretching exercises. Made of $\varnothing$ 75 mm and 50 mm tubular, S235JR steel.

STEP

Stepper with support bar to tone quadriceps and gluteal/buttock muscles by simulating up and down movements with an obstacle provided by the rim of the plate. Made of $\varnothing$ 60 mm and 50 mm tubular, S235JR steel, with rubber bar and plate coverings.

Plexiglass

CASA R.G.B.

This house uses sunlight to generate coloured shadows: a symbolic play element but also a generator of added colour. Children's cognitive processes are characterised by strong synaesthesia, where one sense awakens the others: seeing temperature and touching light. Casa RGB is a small contribution towards increasing sensorial experimentation. It is made of highly polished AISI 304 stainless steel and curtain walls in coloured plexiglass with a good level of transparency.

Product that can be assembled according to a design.

LABYRINTH OF MIRRORS

A maze made of triangular elements that are all the same. The triangles are made of AISI 304 stainless steel, polished to be highly reflective and then set into the ground to create a maze. The elements reflect the various angles of the surroundings, creating a very low-impact installation that is almost camouflaged with the environment and reflects unexpected fragments. Modular product that can be put together according to a design.

ORIGAMI

A jungle gym or more specifically a compilation of motor activities: slide, climbing wall, tunnel, ramp, stairs. Lots of different uses are grouped into an unusual shape, like folded paper or origami. It is bi-coloured, like a fruit with pulp inside a green skin. When it is positioned on a safety surface, the colour of the structure and the playing surface can be matched making it seem as though the inside is spilling out over the ground. It is made of galvanised steel and covered with aluminium panels, complete with resin climbing holds and an AISI 304 stainless steel slide. Walkway is 3 metres off the ground.

ENRICO CLIMBING

Arrampicata Enrico was created and designed by a child wanting something to clamber over. The base rungs for climbing up are positioned at the sides of the frame so that a child can choose how to start her climb. The rungs do not have a precise trajectory but follow the uncertain lines of a child's drawing. This imprecision requires the child's attention so that she discovers the structure's characteristics as she climbs and plays. The frame is made of round solid steel profile with a diameter of 24mm.

VIRGINIA COTTAGE

Casetta Virginia is a frame that children can climb over. It is the three-dimensional realisation of an actual drawing clearly drawn by a child's uncertain, but expressive, hand. It shows an imagination able to represent the whole structure in just a few lines. The innovative characteristic of this project is this play on "children's aesthetics" and not "aesthetics for children". The frame is made of round solid steel profile with a diameter of 24mm.

THE WALK IN THE WOODS

This design is a translation of the archetypical wood into a natural playground. A tree with branches at different heights which, when planted with others, offers a myriad of different pathways and climbs. Children can explore a play area that is without structure or pre-established route. Each tree is made of round solid steel profile with a diameter of 100mm, the tubular grafts lower down the trunk form footholds. Modular product that can be put together according to a design.

GYROSCOPIC BICYCLE

Take a seat on the rotating stool, hold the handlebars and take your feet off the ground. Get a friend to spin the wheel and lean it, you'll see how it unexpectedly begins to turn on itself. Seat made of Ø 500mm. turned AISI 304 stainless steel covered with anti-slip material and connected to a supporting column. Turned, painted aluminium wheel.

IMPOSSIBLE TRIANGLE

This object seems unfamiliar until we look at it from one specific angle. The effect is surprising, and starts us thinking about the sophisticated way our brain and eyes work together to produce what we see. The structure consists of two AISI 304 stainless steel elements: a volumetric triangle and a viewfinder. The optical effect is obtained by positioning the two elements 8m apart.

LEONARDO

Leonardo helps us understand how important water is as a source of energy by applying the same concept historically used for windmills, mills and other machines. Water from the chute falls alternately on the two wheels and makes them rotate. This AISI 304 stainless steel structure consists of a manually operated fountain, a tilting metal bowl and two small mill wheels.
