| EPDM INFILL

EPDM infill granules for artificial grass provide the elasticity of the surface and in this way secures safe usage of the football pitch. By filling the space between blades, infill prevents grass from deformation which is important not only for the appearance but also functionality of the surface.

We offer granules in green color. On special request we can also produce gray, brown, black or other.

Granules have been tested for compliance with the requirements of FIFA Quality Programmed with a positive results.

USAGE

EPDM granules infill is used as a filling for artificial grass for football fields.

| **TPV COLOUR**

We offer TPE-V, thermoplastic rubber granules for application on sport and recreational surfaces. Apart from very low density and high weather conditions resistance, it's main advantage is possibility of recycling and re-usage without worsening the technical parameters.

Colourful and elastic granules are perfect for creating safe playgrounds. Wide choice of colours enables to design fancy projects.

USAGE

TPV Colour granules are used for sport and recreational surfaces as a top layer. It is usually used for playgrounds.

| SBR

We offer SBR granules made of technical rubber compound. SBR granules are used as a bottom layer of sport and recreational surfaces.

USAGE

SBR Granules is used for all kinds of sport and recreational facilities, as the lower layer or as an infill for artificial grass. It can be used on all kinds of surfaces:

- FOOTBALL FIELDS
- RUNNING TRACKS
- PLAYGROUNDS
- GYM AND SPORT HALLS
- TENNIS COURTS
- GOLF FIELDS
- AS AND INFILL FOR ARTIFICIAL GRASS

| EPDM STARLIGHT

EPDM StarLight granules are innovative product with special parameters, used for a middle layer of running tracks. Thanks to a special production technique it has a very low bulk density and high elasticity. High content of EPDM granules makes it very flexible.

USAGE

Granules are used as a middle layer of running tracks system.
